

# Our promise

## Protecting the environment

It is by building on our values of Boldness, Communication, Collaboration, Excellence and Integrity, and by adopting responsible practices in all of our activities, that we intend to fulfill our mission to offer quality dairy products to our customers and consumers.

We strive to maintain a culture of environmental protection, and we are committed to minimizing our environmental footprint by promoting best practices throughout our operations in Canada and the United States.

### **Towards Excellence**

Each employee, department or sector shall endorse and respect our approach to environmental management:

In addition to ensuring compliance with applicable laws and regulations, our teams manage the environmental impacts of our sites and have the following objectives:

- optimize the intensity of product losses;
- optimize the intensity of the consumption of water and energy;
- improve the quality of discharged water;
- increase the recycling of residual materials.

### **Implementation approach**

Agropur relies on the commitment of the Management team and employees of all its sites to implement its EMS and relies on the following elements to guide its daily actions:

- Access to adequate resources, including the necessary tools, resources, and authority;
- Accompanying employees through the network of environmental champions deployed at all sites;
- Communication and accountability.

### **Environmental management principles**

The Environment Department operates the Environmental Management System (EMS) of Agropur based on these principles:

- comply with laws and regulations, including a regulatory watch, an assessment of compliance with facilities and operations, the proposal of corrective actions;
- measurement and management of significant environmental impacts and risk control;
- continuous improvement using both innovation and best practices.

**Agropur considers environmental protection as an essential element of its corporate strategy and expect all teams to work in collaboration towards environmental objectives.**
